B_field_dipole

April 5, 2018

This notebook computes the vector of the magnetic field at any given point and also shows these vectors for some spherical surface. There is still work to be done on beautifying the visual, and the next step is to combine the codes to show a particle moving in this magnetic field. Again, the pictures don't show up in the pdf for whatever reason, so this notebook is also saved to the github.

```
